	GCE AS/A LEVEL – May/June 2010	9702	33

- (iii) Gradient
 The hypotenuse of the triangle must be at least half the length of the drawn line. [1]
 Both read-offs must be accurate to half a small square.
 If incorrect, write in correct value.
 Check for $\Delta y/\Delta x$ (i.e. do not allow $\Delta x/\Delta y$).

y-intercept from graph or substitute correct read-offs into $y = mx + c$ [1]
 Label FO.

- (e) $a =$ gradient value and $b =$ y-intercept value. [1]
 If inverted axes not corrected for -1
 Range of values ($0.1AV^{-10} \leq a \leq 0.9AV^{-10}$, $b = 0 \pm 0.01A$) and appropriate units [1]

[Total: 20]

- 2 (a) Raw value(s) of x : $25.0 \text{ cm} \leq x \leq 35.0 \text{ cm}$ with unit to nearest mm. [1]
- (b) (i) Evidence of repeated measurements of d in (b)(i) or (e) [1]
 Value of $d = 3.0 \text{ mm} \pm 1.0 \text{ mm}$ or $SV \pm 1.0 \text{ mm}$ [1]
 Raw values of d to at least 0.1 mm
- (ii) Value of t in range 1 s to 10 s unless SV indicates otherwise. Allow $SV \pm 5 \text{ s}$ [1]
- (c) Absolute uncertainty in t_1 in the range 0.1 to 0.6 s [1]
 If repeated readings have been taken, then the uncertainty could be half the range.
 Correct calculation to get % uncertainty.
- (d) v calculated correctly with consistent units. [1]
- (e) Second value for d . [1]
 Second value for t . [1]
 Quality: t_2 less than t_1 . (d increases, t decreases) [1]
- (f) (i) Calculation of two values of k . [1]
- (ii) Valid conclusion based on the calculated values. [1]
 Candidate must test against a specified criterion.
- (iii) Relate raw values of x , t and d . Any decimal place arguments score zero. [1]

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	GCE AS/A LEVEL – May/June 2010	9702	33

	Limitations (4)	Improvements (4)	Ignore
A	A_p Two readings not enough (to support conclusion)/too few readings.	A_s Take more (sets of) readings <u>and</u> plot a graph/compare values of k.	Repeat readings.
B	B_p Time too short/reaction time large compared to measured time/parallax error in judging start/stop.	B_s Increase x/lengthen tube/smaller balls/video with timer (playback) in slow motion.	Light gates, motion sensors, data loggers, computers, helpers, solution for parallax error. Set squares, rulers, etc.
C	C_p Difficult to see glass balls.	C_s Use coloured balls/shine light through.	Use ball bearings (type of ball and oil stays fixed).
D	D_p Terminal velocity not reached (by the first marker).	D_s A valid method to check reached TV, e.g. <u>time constant</u> over three markers/video with timer (playback) in slow motion, multi-flash photography/stroboscope.	References to starting point. Do not accept 'move x down' on its own. Change viscosity of oil (oil and glass must remain fixed).
E	E_p Balls not all the same diameter/size/shape/mass	E_s Use micrometer screwgauge/top pan balance	
X	X_p Balls had a hole in/air bubbles on ball or oil.	X_s Clean balls/immerse in oil
